Volume 2

## Data Book

*Detailed results and methodology*

## How to use this data book

This data book describes the methods and provides the detailed survey data from the East Metro Pulse, Volume 2 survey. This survey was conducted in summer 2018 by Wilder Research for the Saint Paul & Minnesota Foundations.

The purpose of this data book is to help readers understand how we did the study and to demonstrate the rigor of the survey methods. This data book can also be used by leaders and policymakers, nonprofit organizations, community groups and others in the East Metro (Dakota, Ramsey and Washington counties) who want to understand more about a particular geographic area or demographic subgroup in the East Metro.

Each table in the data book breaks out the survey results by the following groups: gender, age, education level, household income, housing status, home language and race/ethnicity.

all sources? ..... 158

## Introduction

In February 2016, Wilder Research was contracted by the Saint Paul & Minnesota Foundations to conduct a survey of residents in the East Metro - Dakota, Ramsey and Washington Counties. In addition to the survey, Wilder Research staff from the Minnesota Compass team compiled population-level data, primarily from the U.S. Census Bureau. This was the East Metro Pulse, Volume 1.

The Foundations committed to conducting this study regularly to learn more about East Metro residents' backgrounds, experiences, opinions and needs in a number of areas, including community connectedness, economic opportunity and security, education, health, housing and transportation.

This data book describes the methods and provides the detailed results from the East Metro Pulse, Volume 2 survey, which was conducted by Wilder Research on behalf of the Saint Paul & Minnesota Foundations. These results can and should be used by the Foundation, other funders, nonprofits, government agencies and service providers and community groups to better understand the needs, strengths and experiences of East Metro residents. See the [East Metro Pulse, Volume 2](#) report for more information about the high level findings.

## Methods

### *Survey instrument*

Wilder Research worked with the Saint Paul & Minnesota Foundations to develop a survey instrument and study design for the East Metro Pulse, Volume 2 to answer the key research questions from key geographic areas and groups of interest.

After the key research questions were finalized, Wilder Research drafted a survey instrument to address the research questions and sought feedback from the Foundation and the East Metro Pulse Community Advisory Board to finalize the survey questions. Once the survey was finalized, Wilder Research programmed the survey into our web survey program, Voxco's Acuity.

We translated the survey in Hmong, Somali and Spanish. Wilder contracted with an external professional translation service to complete the translations and then our bilingual staff reviewed the translations and updated the surveys as needed.

Wilder Research pre-tested the survey with a convenience sample of 20 residents of the East Metro, including testing the translated versions of the survey (3 Spanish, 3 Hmong and 10 Somali). During these pre-tests, Wilder Research administered the survey to the respondent and asked for their input on the survey, including the ease of completion and any confusing or offensive questions. Based on the results of these pre-tests, Wilder Research identified needed changes to the survey. The Foundation reviewed and approved these changes before the survey was finalized. See the Appendix for the final English survey instrument.

The survey materials included information about how respondents could contact Wilder Research to speak to a trained staff member who could answer questions, complete the survey over the phone, or assist with bilingual survey administration (including language-specific phone lines for Hmong, Somali and Spanish).

### *Survey sample*

Wilder Research purchased a list of 8,000 randomly sampled of residential addresses from Dakota, Ramsey and Washington Counties. The Ramsey County sample included a representative subset of addresses from the City of Saint Paul and another subset for suburban Ramsey County. The list was obtained from a national sampling vendor, Marketing Systems Group.

## Survey administration

This survey was administered using a multi-mode approach including an initial survey packet with an invitation letter on the cover of the survey, the survey itself and a postage-paid return envelope. This initial mailing, sent on May 17, 2018, was followed by a reminder postcard that was sent to all sampled households after one week, on May 24, 2018. These materials directed respondents to the URL for the online survey and included a unique ID number for each respondent to access the survey. After another two weeks, on June 14, 2018, all sampled addresses that had not yet completed the survey were sent a full survey packet that included a similar invitation letter, the survey and a postage-paid return envelope.

To thank residents for their time and participation, each respondent was provided with a \$10 gift card. Respondents were offered a choice of both plastic gift cards and e-gift cards to a number of venues.

## Survey respondents

We received a total of 1,950 completed surveys for the population-based sample and exceeded our target number of completes for each geographic area. These respondents are statistically representative of the geographic areas they were sampled from; the margin of error indicates how much potential error there is in these estimates for the entire population, which is based on the sample size. The final sample sizes and margins of errors are shown in Figure 1.

### 1. Population-based sample and survey respondents by geographic area

Sampling area	Number of addresses sampled	Target number of completed surveys	Actual number of completed surveys received	Margin of error (adjusted for weighting)
Dakota County	2,000	400	444	+/- 7.2%
Ramsey County	4,000	800	978	+/- 5.1%
City of Saint Paul*	2,000	400	471	+/- 7.5%
Suburban Ramsey County*	2,000	400	507	+/- 6.6%
Washington County	2,000	400	528	+/- 6.2%
<b>East Metro total</b>	<b>8,000</b>	<b>1,600</b>	<b>1950</b>	<b>+/- 4.0%</b>

\*Note. The City of Saint Paul and Suburban Ramsey County are subsets of the overall Ramsey County sample.

## *Opt-in survey*

In addition to the population-based survey, the Saint Paul & Minnesota Foundations created two other opportunities whereby East Metro residents could participate (“opt-in”). First, Wilder Research programmed an “opt-in” version of the web survey and created a URL link that the Foundation advertised through their social media, their networks and on their website. Any East Metro resident could click on the link to complete the survey. Second, the Foundations offered an opportunity to nonprofit organizations based in the East Metro to sign up to get a customized East Metro Pulse survey URL for their organization so they could encourage their program participants/clients/constituents to participate. Any nonprofit that was able to obtain 50 or more completed surveys through their unique link received a customized report of the survey results for their organization as compared with the East Metro Pulse survey results overall. These opt-in web links were open during the entire population-based web survey data collection window.

All East Metro residents who completed the opt-in survey and who completed the optional entry form were entered into a drawing for one of five \$100 gift cards. Wilder Research conducted the drawing and distributed the gift cards to respondents on July 12, 2018.

We received a total of 1,327 completed surveys through the opt-in process. The results of the opt-in survey are not included in this East Metro Pulse, Volume 2 data book; they are reported in the participating nonprofits’ data books.

## *Data analysis and weighting*

Wilder Research checked all completed surveys as they were returned. After the paper surveys were entered and the paper and web survey data sets were combined, the survey data were weighted to produce reliable estimates of population parameters for each of the sampling areas: Dakota, Ramsey and Washington counties, the City of Saint Paul and suburban Ramsey County. Weighting compensates for practical limitations of a survey sample, such as differential nonresponse among different demographic groups. For example, it is very common for women to respond to surveys at a higher rate than men. By using demographic information about the target population, weighting reduces the bias of survey estimates.

The weighting process entails three steps. The first step consists of the computation of *design* or *base weights* to reflect the number of adults in the sampled household. In the second step, base weights are adjusted so that the weights result in a sample whose demographic characteristics correspond to the demographic characteristics for the target population based on age, gender, education and race/ethnicity. For this study, survey weights were calculated using the method of *Iterative Proportional Fitting*, which is commonly referred to as “*raking*.” Survey data for these demographic questions included some missing values. Missing values were

replaced, where feasible, by logical inference. A hot-deck imputation procedure was used to attempt to impute the remaining missing values. This resulted in 1,950 cases eligible to be weighted. The data were weighted against the U.S. Census Bureau, 2012-2016 estimates, American Community Survey: <http://factfinder2.census.gov/>. Finally, adjusted weights are put through a series of quality control checks to detect extreme outliers (weights were truncated so no one respondent counts too strongly in the analysis) and to prevent any computational or procedural errors.

Wilder Research also coded and analyzed the open-ended survey responses. Once the codebook was tested, our internal quality control process was employed to ensure consistency across the individuals coding completed surveys. The final codebook is included in the appendix. The coded responses are included in the tables in this data book, but the raw open-ended comments from respondents are not included to protect respondent confidentiality (and because there are thousands of comments).

After the data was cleaned, coded and weighted, Wilder Research produced the data tables that are included in this data book. There is a table for every question in the survey, with results broken out by subgroups of interest (see next section).

Wilder Research also worked with the Saint Paul & Minnesota Foundations to conduct additional cross-tabs and other analyses as requested to ensure that all of the key research questions were answered.

## How to Read the Tables in this Data Book

Each table in the data book breaks out the survey results by the following groups:

- ▶▶ East Metro overall, plus the subgeographies of Dakota County; Ramsey County (overall, City of Saint Paul, suburban Ramsey County); Washington County
- ▶▶ Gender: Female, Male (we also asked about Transgender in the survey but we did not receive enough respondents from this group to report these results)
- ▶▶ Results by age group: 18-34, 35-44, 45-54, 55-64, 65+
- ▶▶ Results by education: Less than high school/GED, high school diploma or GED, some college/trade school/Associate degree, Bachelor's degree or higher
- ▶▶ Results by household income: Less than \$20,000; \$20,000 to \$39,999; \$40,000 to \$59,999; \$60,000 to \$79,999; \$80,000 to \$99,999; \$100,000 to \$149,999; \$150,000 or more
- ▶▶ Results by housing status: owner; renter; lives with friends or family, homeless or some other arrangement
- ▶▶ Results by home language: English only, English plus another language, another language only
- ▶▶ Results by race/ethnicity: American Indian, Native American, and Alaska Native; Black, African American, and African; Asian and Asian American; Hispanic and Latinx; and White and Caucasian

The columns in each table correspond to the response options on the survey. Some answer categories are combined because of the low number of responses in those categories. The last column in each row of the table shows the number of respondents (unweighted) related to the percentages in that row. Data is suppressed in rows with a total number of respondents fewer than 20 to protect respondent confidentiality. Some questions apply only to certain respondents due to skip patterns in the survey. In these cases, the total number of respondents (N) in the last column shows how many respondents were asked this question.

Some questions were open-ended, i.e., respondents wrote their own answers on a blank line. The responses to these types of questions were grouped according to theme (i.e., "coded") in order to reveal themes in the data. In some cases, respondents were allowed to provide more than one answer.

The Saint Paul &  
Minnesota Community  
Foundations

Dear Community Member,

I am writing to ask you to participate in our second East Metro Pulse survey.

The Saint Paul & Minnesota Community Foundations have always worked to strengthen our state and ensure that Minnesota is a place where everyone can thrive. We know that we are only able to achieve this mission through effective community partnerships.

This survey, commissioned by The Saint Paul Foundation and conducted by Wilder Research, focuses on residents in the East Metro—Dakota, Ramsey and Washington Counties. The data will be used to inform elected officials, funders and local leaders about the opportunities and challenges facing the East Metro region.

We want to learn about your experiences in, and connection to, our community. Please take a moment to share your story.

The survey will take about 15 minutes of your time and can be completed in three different ways:

1. Complete the survey online at:  
**[www.wilderresearch.org/go/EastMetroPulse2018](http://www.wilderresearch.org/go/EastMetroPulse2018)**  
Access Code: [PIN]
2. Fill out the enclosed paper survey and return it in the postage-paid envelope provided.
3. If you would prefer to complete the survey over the phone, please call Maria Robinson from Wilder Research at 651-280-2732. We can help you take the survey.

**If you complete the survey by June 29, 2018, you will receive a \$10 gift card to thank you for your time.** You may select from the following options:

- **Amazon.com**, received via email, redeemable online
- **Target, Super America or Cub Foods**, received as a plastic card via U.S. mail, redeemable in-store

Your household was randomly selected from all households in Dakota, Ramsey and Washington Counties. Your participation is voluntary and your responses are confidential. **We assure you that your information will not be shared or used for any other purposes.**

For more information about the East Metro Pulse survey, please visit: [www.eastmetropulse.org](http://www.eastmetropulse.org).

***Thank you for sharing your story!***

Sincerely,

Eric J. Jolly, Ph.D.  
President and CEO  
The Saint Paul Foundation

## Acknowledgements

The authors would like to thank Nadege Souvenir and Adam Murray from the Saint Paul & Minnesota Foundations and Mary Kay Bailey, independent consultant, for their leadership and support throughout this project.

The East Metro Pulse Community Advisory Board provided feedback on the overall research questions and a draft of the survey input. Their feedback was much appreciated and helped to improve the study design. The Advisory Board will also provide feedback on the final study reports and will be our partners in using the data from East Metro Pulse to address issues and improve conditions for East Metro residents.
